

Hero Section UX/UI Redesign: Driving Instructor Booking Platform

Comprehensive breakdown of the landing hero redesign executed under B. J. Fogg’s Behavior Model ($B = MAP$: Motivation, Ability, Trigger).

1. Project Overview & Objective

- Primary Goal:** Redesign the hero section to guide visitors toward a single high-conversion action: searching available instructors and booking a trial lesson.
- Core KPI:** Search & direct booking conversion rate from the first screen.
- Secondary KPIs:** Scroll depth to the first action and hero exit/bounce rate.
- Deliverables:** Figma component system, responsive layouts (4 breakpoints), and updated design tokens.

2. Before vs. Current Iteration (WIP)

2. Legacy Version (Baseline Issues)

- Motivation Misalignment:** Focused on company branding ("*Eesti esimene broneerimisplatvorm*") rather than user outcome (passing the exam). Empty marketing claims ("*Kiirelt*") lacked proof.
- Ability Friction:** Required multiple cognitive decisions before taking action (City + Transmission + Name input). Competed across 3 equal callouts (Search bar, Orange Button, Quiz).
- Trigger Dilution:** Competing buttons, low-contrast instructor profile link ("*Vaata profiili*"), and distracting social media icons leading users off the conversion path.

1. Current Iteration (Work in Progress)

- Unified Action Pathway:** Search bar, location preset, and primary CTA fused into a single conversion unit ("*Näita vabu õpetajaid* →"). Quiz converted into an unobtrusive inline link.
- Value & Friction Removal:** Added an action-cost reduction line ("*Võtab 1 minuti · Tasuta · Ilma registreerimiseta · Tasuta tühistamine 24h enne tundi*").
- Actionable Instructor Card:** Converted preview image into an interactive trigger containing real-time availability ("*Vaba homme 14:00*"), direct trial booking CTA, exam pass-rate stats, and pricing clarity.
- Distraction Removal:** Replaced the carousel and social icons with proof points and supply transparency ("*+ 31 õpetajat Tallinnas vabade aegadega sel nädalal*").

3. Comparative Summary (Fogg Model)

Dimension	Legacy Version (Before)	Current Redesign (WIP)
Headline & Copy	Feature-oriented; decorative <i>///</i> shapes; no outcome proof.	Value-oriented (" <i>Leia sõiduõpetaja, kellega jõuad eksamini</i> "); dynamic speed chip proof.
Search & Input	3 separate fields; manual gearbox selector; redundant search icon.	Geolocation-detected city; optional district input; gear filter moved to results.
Call to Action	Split weight (Orange CTA + Quiz button + Search submit).	Single orange focal point (<i>#f97316</i>); quiz relegated to a text link.
Instructor Card	Static photo with passive profile link.	Real booking trigger with first-attempt pass rates and immediate reservation.
Trust Elements	Generic checkmark icons with external social exit links.	Verified booking reviews + official exam statistics; footer relocation for socials.

4. Next Iteration Roadmap (Planned Improvements)

- ☐ Fine-tune visual padding and container corner radius across all 4 responsive breakpoints (1440px, 1024px, 768px, 360px).
- ☐ Refine responsive search collapse on mobile screens (360px – 768px).
- ☐ Verify WCAG AA color contrast ratios for white label text over *#f97316* button states.
